

## **Students**

### **Pediculosis (Head Lice)**

The Board of Education authorizes the Superintendent of Schools to work with the School Medical Advisor in an effort to develop and implement regulations concerning pediculosis or head lice. The regulations are to include identification, treatment procedures, and notification process which will insure prompt and medically accurate action for students having pediculosis. The regulations are also to include assertive procedures which will reduce the opportunity of spreading pediculosis to other students.

The Board of Education (Board) is committed to maximizing students' academic performance and physical wellbeing in a healthy and safe environment. The Board recognizes that head lice infestations do not pose a health hazard, are not a sign of uncleanliness, and are not responsible for the spread of any disease. Misinformation about head lice causes anxiety for parents/guardians and school staff. The goals of providing a healthy and safe environment for students with head lice are to (1) maximize academic performance; and (2) minimize absences due to unnecessary exclusion from school of students with head lice.

The school nurse will annually provide information to families of all students on the symptoms, treatment, and prevention of head lice. Parents are encouraged to check their children's heads for lice if the child is symptomatic. The school nurse may check a student's head if the student is demonstrating symptoms.

### **Management on the Day of Diagnosis**

The Board recognizes that head lice infestation poses little risk to others and does not result in additional health problems. The management of pediculosis should proceed so as to not disrupt the education process. Nonetheless, any staff member who suspects a student has head lice will report this to the school nurse or Principal. District employees will act to ensure that student confidentiality is maintained in order to avoid embarrassment.

The Principal or school nurse will notify the parent/guardian by telephone or other available means if their child is found to have head lice. Verbal and written instruction for treatment will be given to the family of each identified student. Based upon the school nurse's recommendation, other children who were most likely to have had direct head-to-head contact with the assessed child may be screened for head lice. The principal in consultation with the Superintendent or Superintendent Designee, may send more targeted information to families of students when a specific classroom has a high incidence of pediculosis.

The Board recognizes that The American Academy of Pediatrics and the National Association of School Nurses discourage "no nit" policies. Therefore, no student will be excluded from attendance solely based on the grounds that nits may be present. In addition, the school nurse is encouraged to offer extra help or information to families of children who are repeatedly or chronically infested.
